\*Post-consumer recycled materials: Waste generated by households or commercial, industrial and institutional facilities in their role as end users of a product that can no longer be used for its intended purpose.

\*\*Pre-consumer/Post-industrial recycled materials: Matter diverted from the waste stream during the manufacturing process, determined as the percentage of material, by weight. Examples include planer shavings, sawdust, bagasse, walnut shells, culls, trimmed materials, overissue publications, and obsolete inventories. The designation excludes rework, regrind, or scrap materials capable of being reclaimed within the same process that generated them (ISO 14021). Formerly known as postindustrial content.

\*\*\*LEED % recycled content: Total post-consumer recycled %, plus 1/2 pre-consumer/post-industrial recycled %.
