

HEALTHY WORK HABITS CAN INCREASE PRODUCTIVITY

The Sierra User Interface Kit is a great new option for our most popular height adjustable workcenters, Sierra HX and Sierra HXL. It was designed to encourage healthier work habits for individuals and increased productivity levels for organizations.

The user interface features a cable that enables individual users to connect any Sierra HX or HXL workcenter to their PC or laptop computer. Once the cable is connected and the complimentary software is downloaded, users can personalize their workcenter by programming up to 3 different height preferences and establishing personal goals for how often they want to work standing up, or how many calories they would like to burn during their workday.

The interface is backwards compatible for all Sierra HX and HXL workcenters, making it an excellent option for retrofitting existing workspaces or for new installations.

The Home Screen displays progress for the day.

Reminders instigate movement and keep daily goals in reach.

SIERRA INTERFACE KIT

Sierra Interface Cable

Length	Model #	List
78"	SE-CI-USB2-B	\$122
